> With more time, Pinscreen, the Los Angeles start-up behind the technology, believes its renderings will become so accurate they will defy reality.

Pinscreen is getting sued by their former VP of Engineering for faking their results and for assault and battery [1].

The linked piece is a surprisingly compelling read.

ObsoleteNerd on Oct 8, 2018 [-]

There's something so refreshing about reading things in legal point form. No fluff, easy to read fast, and no "life story before the recipe" type writing.

I wish more news articles were written with such brevity. I read pretty much the whole thing with ease, whereas I would struggle to read an article the quarter the length with all the fluff and irrelevant drivel added to most articles these days.

whoah, fakery recursion.

jarsin on Oct 8, 2018 [-]

HAHA welcome to the real world outside of the Ivory Tower of Google. Everything is smoke and mirrors.
